

The K&L Plating Advantage

State Of The Art Anodizing Technology

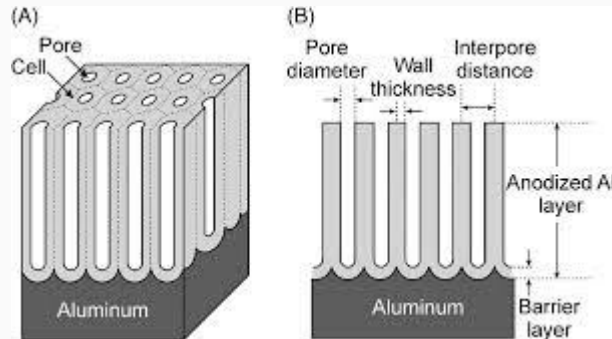

Advanced Technology

K&L Plating has invested in an advanced DC power supply system that utilize the most accurate controls producing consistent results time after time.

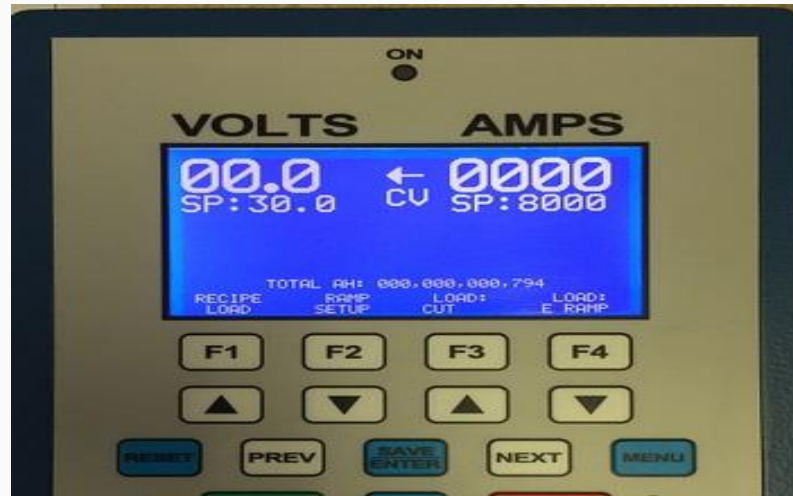

Superior Anodic Pore Structure

Accurate controls produce a consistent anodic structure that will yield better corrosion resistance, hardness, color fastness of dyes and sealability of the pore.

Unsurpassed Quality

Operator error is eliminated with the E-Z Control. Computer controls automatically compensate for resistance by maintaining constant amperage throughout the entire anodizing cycle.

Your Reliable Partner for Quality Anodizing Services!

Your products deserve the best, don't take chances with the rest!

Our state of the art E-Z Anodizing Process, coupled by unrivaled technical capability will produce results you can count on time and time again.
